

ABSTRACT OF THE DISCLOSURE

The relaxation lamp has an elongated tubular body extending vertically from a base to a removable top closure opposite the base. The elongated tubular body is made from a plurality of vertically extending slats and a plurality of vertically extending moldings connecting the slats in the elongated tubular body to form a plurality of adjacent side walls. A plurality of pegs disposed interiorly of the upper end of the side walls, the pegs connected to the moldings for support of the removable top closure. A light fixture disposed interiorly of the lower end of the side walls, the light fixture fasten to a member that is connected to the base and a protective coating applied to lamp to form a seal. The light fixture illuminates the lamp to create an atmosphere of serenity.
